

C²: Chalte Chalo

Itish Jaiswal | Ananya Gupta

Michael: The Student

Meet Michael: The Rider

"I have to walk 10 mins to the bus stop"
"The bus takes too long"

Barriers: Long wait times, unreliable schedules

Current Behaviour: Walk or uber (60% of students)

Insight: 75% would ride the bus for *usable* rewards

Meet Dan: Caffè Bene Cashier

"It's dead after 2 PM."

Barriers: Struggles to reach students effectively during off-peak hours

Traditional ad cost: \$5-10 per click

Guarantee: **NONE**

Dan: Caffè Bene Cashier

Jordan: MTD Director

Meet Jordan: MTD Director

46% of riders in Champaign-Urbana have no car access.

Potential riders are forced to uber/carpool/walk.

Need: Funds for service expansion & hydrogen stations for electric bus fleet

Systems Innovation

Our Solution: Create a shared value economy through C²

Michael

Earns redeemable points for
riding automatically

Sam

Gets guaranteed customers
during off peak hours

Jordan

Sees 10% ridership increase &
more advertising revenue

Breaking the Cycle

Current State

Low Ridership

Less Funding

Worse Service

Future State (C²)

More Rewards

Higher Ridership

Funding & Service

Behavioral Psychology

Habit Loops

Cue (Commute) → Routine (Bus) →
Reward (Points)

Loss Aversion

Users ride to protect their "streak".
Losses feel 2x worse than gains.

Social Proof

Leaderboards validate individual action
through community visibility.

3-Layer Verification

LAYER 1

Motion Classification

Accelerometer detects bus profiles (idle/stop/start).
Processed on-device.

85% Accuracy

LAYER 2

Geofence Check

Verifies user is within a bus stop zone and moving along a GTFS (General Transit Feed Specification) route.

95% Accuracy

LAYER 3

In-Bus Bluetooth Validation

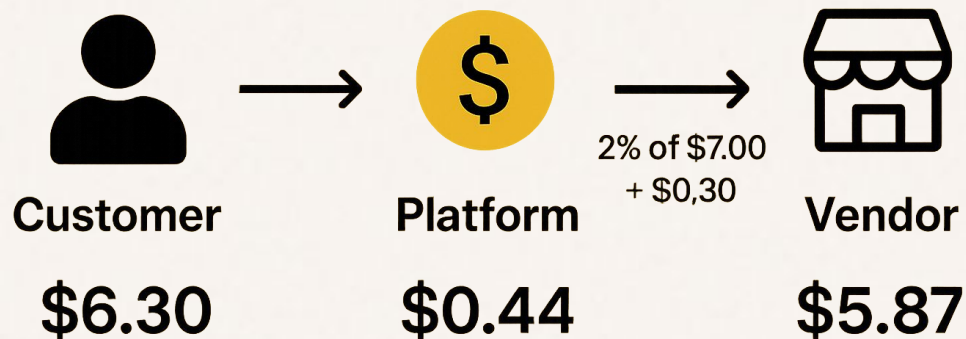

Quick tap on the phone when app detects the bluetooth beacon.
Riders may scan QR code alternatively for guaranteed verification

Fraud Proof

Sustainable Business Model

Transaction Breakdown

- Payment processor integration into app
- Sam only pays when C² brings him a customer
 - 2% + \$0.30 per transaction
- \$1.14 CAC VS \$5-10 for google ads
- **23% immediate ROI with C²**

Example: Caffe Bene

Customer Order	\$7.00
Discount (10%)	-\$0.70
C ² Fee (2% + \$0.30)	-\$0.44
Total Acquisition Cost	\$1.14

Marketing revenue

Implementation Roadmap

MONTHS 0-3

Phase 1: Prototype

15-20 Student Testers. Validation of tracking accuracy.

Budget:
\$10-25k

MONTHS 4-6

Phase 2: Pilot

500 Pilot Users. 5 Vendor Partners.
MVP Launch.

Budget:
\$30-60k

MONTHS 6-12

Phase 3: Scale

2,000+ Users. MTD Data Integration.
City-wide rollout.

Budget:
\$80-150k

Risks & Mitigation

Privacy

On-device processing.
FERPA Compliant.
Opt-in consent.

Competition

Exclusive local partnerships.
University Endorsement.

Retention

Flexible terms.
Transparent ROI analytics.

Calculations

Riders: From our customer discovery, nearly 50% of the users used public transit an average of 4 times per week so we will use those numbers.

- 4 rides/week → 100 points/week
- Weekly \$1 reward → ~\$15 per semester
- Points could also be redeemed for 10% off discounts or a free treat

Vendors: From our interview at Cafe Bene, the cashier said their average order is \$7. Let's assume 100 people redeem their 10% discount in a week and that increases their customer return rate by 20%.

- Cost: $100 \times 7 \times 10\% = \70
- 20% return rate = 20 returning customers
- Increased Revenue: $20 \times 7 = \$140$
- Net ROI: 2× compared to conventional advertising

Transit Authority: 60% of the students mentioned not using the public transport available which is 36,000 students (approx. 60,000 enrolled students in 2025). Currently, only 9% of Champaign-Urbana workers use public transit (mtd.org). If C² drives 10% adoption among non-riders:

- 10% of 36,000 = 3,600 new riders on top of the current 9%
- Transit system sees significant increases in ridership-linked funding
- Higher usage → justification for route expansion & grants
- Strengthened partnerships with local vendors for transit marketing

Vendor ROI Example:

Student redeems 10% off \$7 order at Cafe Bene:

- Vendor discount: \$0.70

- C² transaction fee: $(\$7 \times 2\%) + \$0.30 = \$0.44$
- Total vendor cost per redemption: \$1.14

At 100 redemptions with 20% customer return rate:

- Total vendor investment: $(100 \times \$0.70) + (100 \times \$0.44) = \$114$
- Return customer revenue: $20 \times \$7 = \140
- Immediate profit: \$26
- ROI: $(\$26 / \$114) \times 100 = 22.8\%$ immediate return (excludes long-term customer lifetime value)

Revenue Projections for pilot phase:

Pilot phase: 5 vendors, 100 redemptions/week, average transaction fee of \$0.44

- Fee per vendor per week: $100 \times \$0.44 = \44
- 5 vendors: $5 \times \$44 = \$220/\text{week}$
- First month of pilot phase: $\$220 \times 4 = \880
